UNO Application Final Project

May

2026

CONTENTS

- 01. Uno Application
- 02. Team Roles
- 03. Ruba's contribution
- 04. Luke's contribution
- 05. Manuel's contribution
- 06. Lemarion's contribution
- 07. Live Demo
- 08. What can be polished
- 09. Group Notes
- 10. Conclusion

Meet the Team

Ruba

Hi I'm Ruba and my role was Project Manager/ Full Stack Developer. I kept the group updated and organized and integrated the backend elements of the project as well as the front end elements.

Luke

I'm Luke and my role is being the project lead. I implemented the game logic and the text-based version of the game for testing purposes.

Manuel

Hi my name is Manuel, my job was to create and implement the Ui/ux for our game of Uno. I was also in charge in coding this UI/UX was a group contribution. My code was done by using a javascript language called p5.

Lemarion

Hi I'm Lemarion and my role was Tech led/ developer. My job was to implement class for the backend and made sure it ran smoothly.

Luke

Project Leader

Led implementation
Built game logic
Testing process
Ran game simulation
Debugging support
Core classes

1

UnoApp.java

2

Testing/Debug

Lemarion

As Our Tech Lead and Developer My main responsibility was to implement the main core classes cleanly like the Cards class, deck class, and the UnoApp main class. I had to make sure everything followed our design so the team can continue to build.

Development
Developer

1

Main Class

2

Card, deck Class

Manuel

UI/UX designer
Developer
Designed UI
Designed UX flow
Used p5.js
Developer
Tested code in 3 separate
languages. Js, C++, Java
Experiment different languages
(Javascript, Java)

UI

Ux

```
// ----- OPPONENT -----  
void drawOpponent() {  
  float y = 140;  
  
  fill(255);  
  ellipse(width / 2, y - 30, 50, 50);  
  
  fill(255);  
  textSize(16);  
  text("Player 2", width / 2, y);  
  
  stroke(255, 120);  
  line(width / 2 - 80, y + 10, width / 2 + 80, y + 10);  
  noStroke();  
  
  for (int i = 0; i < 6; i++) {  
    drawMiniCard(width / 2 - 60 + i * 20, y + 10);  
  }  
  
  textSize(14);  
  text("6 Cards", width / 2, y + 85);  
}  
  
// Upgraded UNO 2-player UI (cleaner layout + spacing)  
function setup() {  
  createCanvas(1200, 700);  
  textFont('Arial');  
  rectMode(CENTER);  
}  
  
function draw() {  
  drawBackground();  
  drawTopBar();  
  drawOpponent();  
  drawCenterArea();  
  drawUnoButton();  
  drawPlayerHand();  
}  
  
// ----- BACKGROUND -----  
function drawBackground() {  
  background(18, 92, 74);  
  
  noStroke();  
  fill(14, 74, 60);  
  rect(width / 2, height / 2, 1080, 680, 36);  
}
```

Ruba

Project Manager

Managed meetings
Handled project timeline
Created reports
Ran game testing
Created REST API- UNO Server
Created desktop application
Launcher
Created index, which serves as a
shell to load the p5 file.
Expanded UI and changed it to fully
functional.

1

UnoServer and
UnoLauncher

2

Index.HTML &
uno_ui_p5_sketch.js

Live Demo of Uno

Over to Ruba!

A small list of things we can if we had more time in the future

1. **Multiplayer/ Liver Server**

Instead of running the game on a local server with a Bot second player, we could create a live server, where multiple players can join the game from different devices.

2. **Sound Effects**

We could create swishing sounds when the cards are shuffled or ticking sounds when the timer hits the 10 second mark.

3. **Intricate Animation**

We could create a shuffling opening animation when the game is first initiated.

Group Member Notes / Thanks

Luke

If I had more time, I would've implemented rules like being able to stack draw cards.

Lemarion

I want to thank my teammates for their collaboration and support throughout the project it made the process much smoother.

Ruba

Would've really liked to expand this to a multiplayer/ live server game!

Manny

Thank you teammates for being able to help me and help everyone else with their roles

Thank you!
